

Three-Tier architecture

COURSE: DEVOPS

MODULE: Three-tier architecture for aws cloud infrastructure

TRAINER: Mr. MADHUKAR

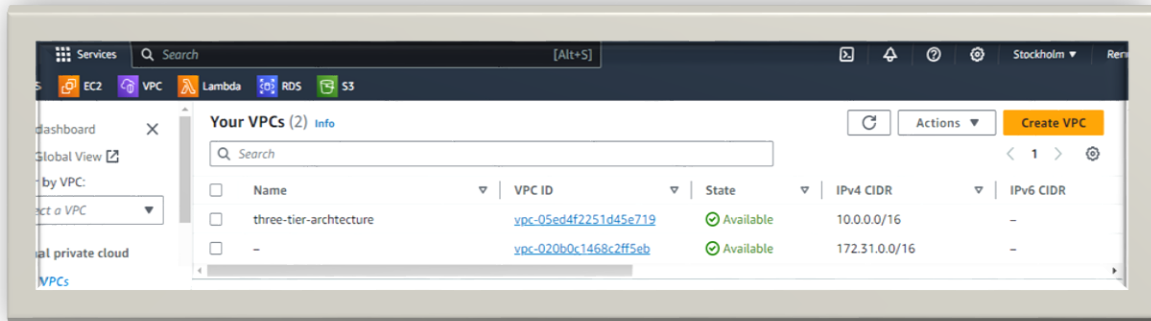

Benefits of a Three-Tier AWS Architecture

NAME : Thella Naveen

Phone : 7095396259

Email : navee9404@gmail.com

1. Let's Begin by Creating a VPC:

2. Create the Required Subnets

- **Presentation Tier Subnets:**

my-Public-Subnet-1: 10.0.1.0/24 (us-west-2a) my-Public-

Subnet-2: 10.0.2.0/24 (us-west-2b)

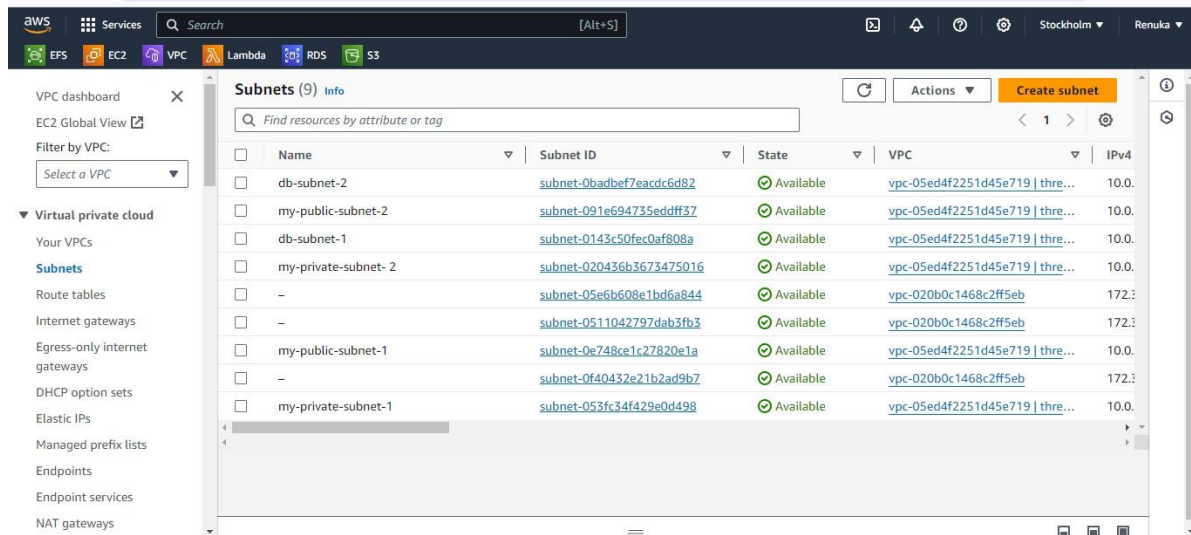

- **Application Tier Subnets:**

my-Private-Subnet-1: 10.0.3.0/24 (us-west-2a) my-Private-

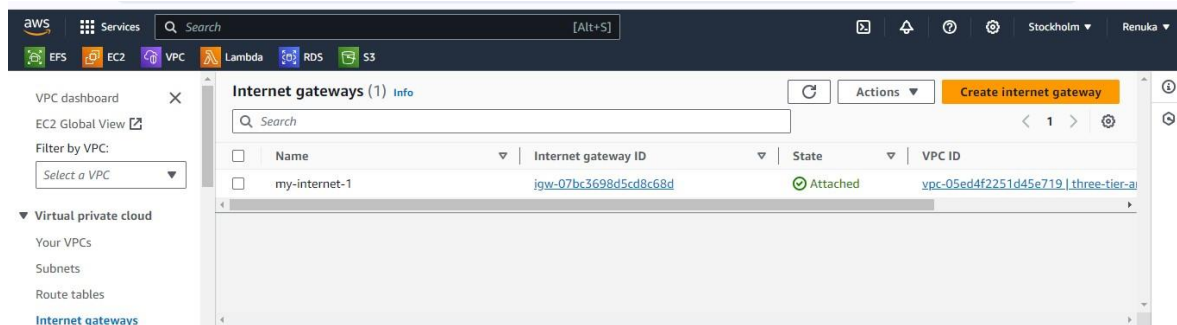

Subnet-2: 10.0.4.0/24 (us-west-2b)

- **Database Tier Subnets:** DB-Subnet-1: 10.0.5.0/24 (us-west-2a)

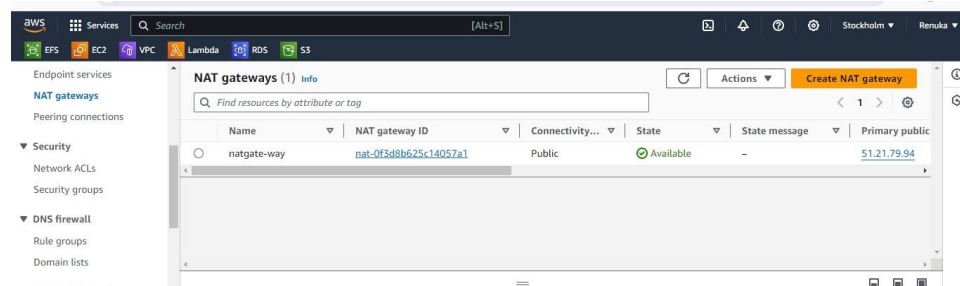

DB-Subnet-2: 10.0.6.0/24 (us-west-2b)

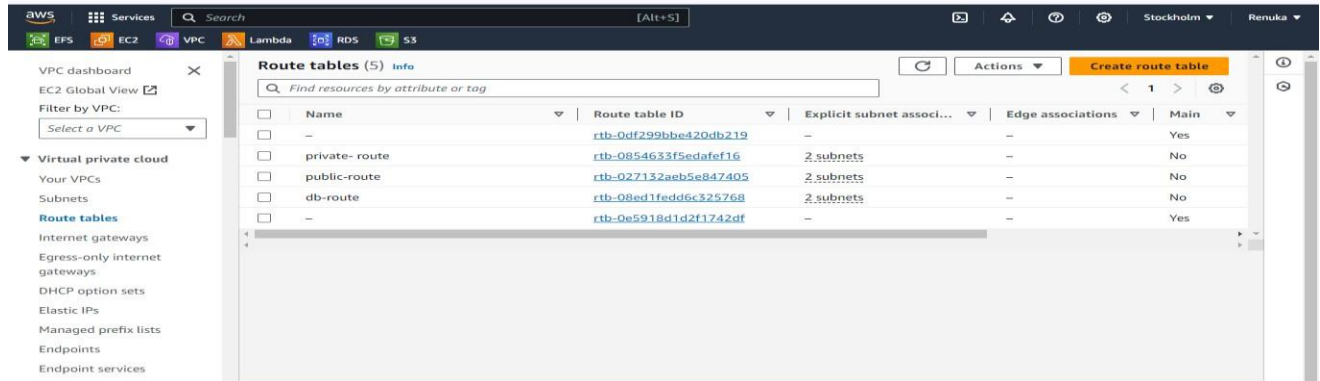

3. Setup an Internet Gateway

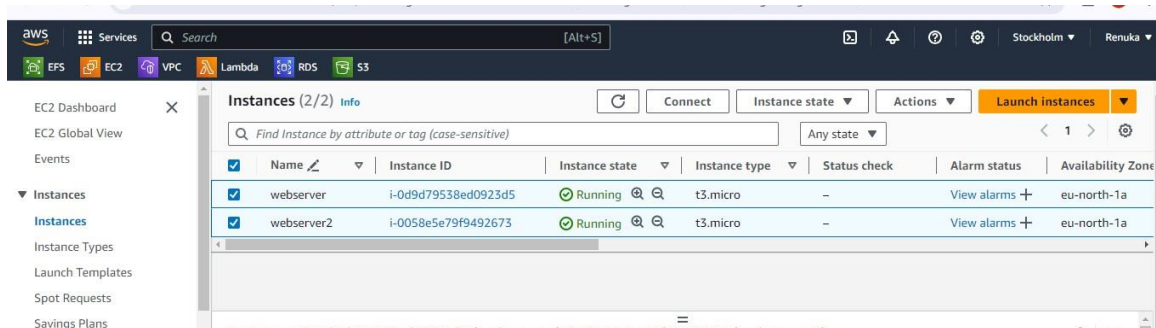

4. Setup a NAT Gateway

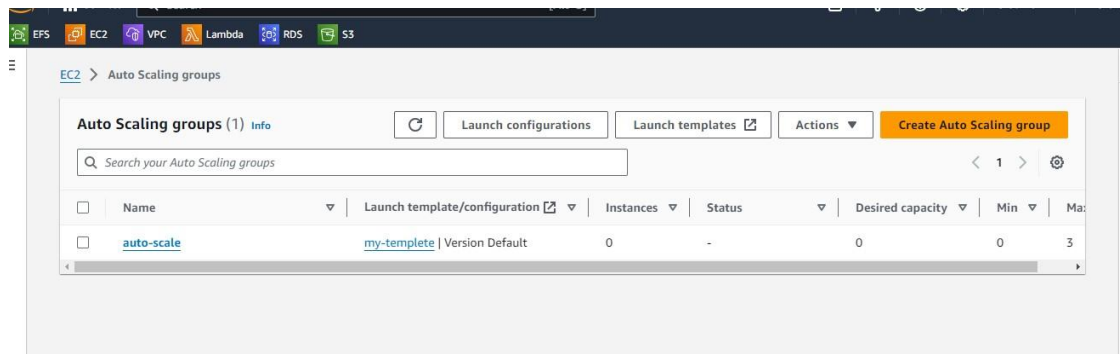

5. Create the Route Tables and Associate them with the Relevant Subnets

6. Create a Launch Template with a Bootstrap script to Install & launch Apache

7. Create Auto Scaling Group

8. Navigate to the RDS Service
